Backend-focused Software Engineer (final-year CSE) skilled in Java, Spring Boot, Python, and PostgreSQL. Experienced in building production-style REST APIs with JWT auth, RBAC, and Docker across microservices and monolithic architectures, with hands-on AI/ML training in Python. Hackathon runner-up with a passion for clean, scalable code.

PROFESSIONAL EXPERIENCE

- Java Technology Stack Virtual Intern, Infosys Springboard** 06/2026 – Present
- Contributing to CivicPulse Nexus, a microservices-based Smart Governance platform (see Projects)
 - Gaining hands-on exposure to Spring Cloud, Kafka, Eureka, and Keycloak-based OAuth2/JWT auth across a multi-service system
- Java Developer Intern, Elevate Labs** 09/2025 – 11/2025
- Contributed to backend application development using Java in a collaborative Agile environment
 - Assisted in implementing business logic and developed unit tests to validate functionality and improve application stability

TECHNICAL SKILLS

Languages: Java, Python, SQL

Backend Development: Spring Boot, Hibernate, REST APIs, Microservices, Kafka, Spring Security, OAuth2, JWT

AI/ML: Python, NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn (Deep Learning — in progress), OpenAI API

Databases & Caching: PostgreSQL, MySQL, Mongo DB

Tools & DevOps: Git, GitHub, Docker, Maven, Swagger/OpenAPI, Eureka, Keycloak

CS Fundamentals: Data Structures and Algorithms

PROJECTS

Swastra – Healthcare Management System (Backend)

Tech: Java 21, Spring Boot, Spring Security, JWT, PostgreSQL, Hibernate, Docker, Swagger

- Designed a Spring Boot backend supporting Admin, Doctor, and Patient roles with JWT-based auth and role-based access control
- Designed appointment booking with double-booking prevention using Spring Data JPA
- Modeled an 8-table relational schema in PostgreSQL and documented 25+ APIs with Swagger

CareerGPT – AI-Powered Adaptive Career Guidance System

Tech: Java 21, Spring Boot, Spring Security, JWT, PostgreSQL, Python, FastAPI, OpenAI API

- Built a Spring Boot backend handling JWT auth and student session management, with PostgreSQL persistence via Hibernate ORM
- Built a Python FastAPI AI microservice with adaptive LLM-based questioning and live KCET/COMEDK data integration for personalized career report generation

CivicPulse Nexus – Smart Governance Platform (Infosys Springboard)

Tech: Java, Spring Boot, Spring Cloud, Kafka, Keycloak, PostgreSQL, Docker, Eureka

- Working on a microservices architecture handling Citizen and Grievance services, with complaint lifecycle management (Registered → Assigned → In Progress → Resolved → Closed) and automated SLA tracking with escalation
- Implementing event-driven communication using Apache Kafka (e.g., CitizenRegisteredEvent, GrievanceCreatedEvent) to keep services loosely coupled
- Gaining exposure to API Gateway routing, Eureka service discovery, and Keycloak-based OAuth2/JWT authentication

ACHIEVEMENTS & CERTIFICATIONS

- Runner Up – Devfusion Hackathon**, Google Developer Groups, Atria Institute of Technology
- AI for Skilling – Capgemini & Nasscom Foundation:** Python for ML (NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn), Deep Learning (in progress)
- Oracle Cloud Infrastructure (OCI) 2025 Certified AI Foundations Associate** – Oracle University
- Java Spring Framework, Spring Boot & Spring AI (Generative AI)** – Udemy (Telusko)

EDUCATION

Bachelor of Engineering, CSE (IoT, Cybersecurity With Blockchain Technology),

09/2023 – Present

Sir M. Visvesvaraya Institute Of Technology

Expected Graduation: June 2027 | Present CGPA: 8.18
